

Shark fin soup is often described as a traditional soup or stewed item of Chinese origin. Shark finning provides the primary ingredient; this comes from the capture of a shark and removal of the fins while the shark is still alive.

Shark cartilage and shark liver oil is promoted as a health remedy. Some companies' claim that it has anti-cancer properties.

The anti-cancer claims are not proven and are disputed by the American Cancer Society, the FDA, Sloan-Kettering, Johns Hopkins University, and other reputable organizations. There are no reputable scientific studies proving that shark supplements have any effect on immune function.

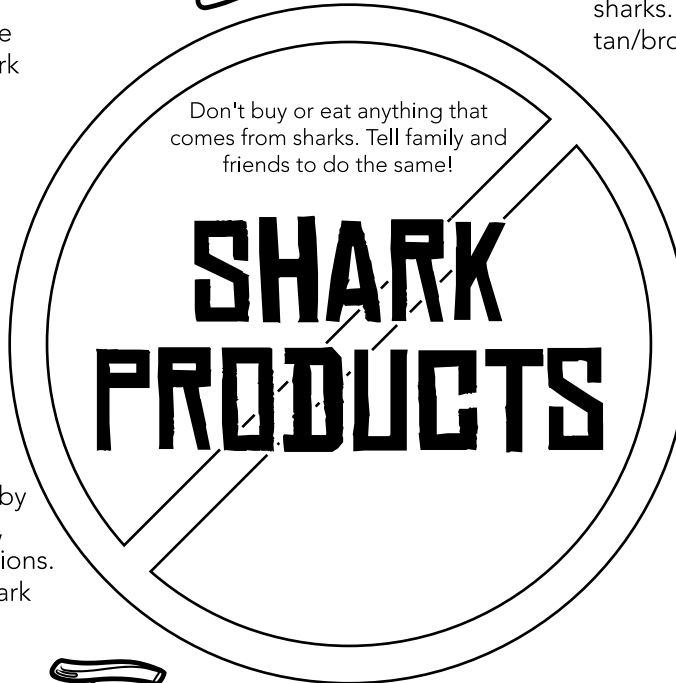

It takes 10-25+ years for most sharks to fully mature and reproduce.

A dead baby shark preserved in a glass jar can sometimes be found in gift shops. These are often a byproduct of commercial fishing. Souvenirs like this are further evidence of the harm being done to our Oceanic ecosystem.

Shark teeth that are white/ivory in color are often sourced from recently killed sharks. Fossilized shark teeth are dark tan/brown and black in appearance.

Don't buy or eat anything that comes from sharks. Tell family and friends to do the same!

SHARK PRODUCTS

Squalene = Organic compound obtained for commercial purposes primarily from shark liver oil

Squalane = Hydrocarbon derived by hydrogenation of squalene

Squalene/squalane are often found in various cosmetics, lotions, eye-makeup, lipstick, sunscreen, etc. Check the ingredients on the label and contact the company if they don't specify the source of their squalene (plant based versions are available).
