Named for their small weed-like lobes near the jaw
Length: 1.2 - 3 meters
IUCN: Least Concern

IUCN RED LIST CATEGORIES

DATA DEFICIENT

More information is needed to assess species conservation status

LEAST CONCERN

Species population is not currently a concern or considered for the threatened category

NEAR THREATENED

Species population is close to being added to the threatened category

VULNERABLE

Species considered to be facing a high risk of extinction in the wild - action required

ENDANGERED

Species considered to be facing a very High risk of extinction in the wild - action greatly required

CRITICALLY ENDANGERED

Species considered to be facing an extremely high risk of extinction in the wild - severe action required
